EXPERIENCE

Intern Web Developer

IKEA

📅 08/2023 - 2024

- Collaborated with the development team to improve a web platform used by employees for scheduling and accessibility
- Focused primarily on frontend-related tasks through Jira, especially E2E testing and documentation
- Participated in daily standups and used agile methods for task prioritization and delivery
- Contributed to backend development, version control, and CI/CD pipelines
- Worked with Google Cloud services, including BigQuery and Cloud Functions, to process and analyze large datasets
- Developed and improved internal web solutions using TypeScript (React framework) and JavaScript

Intern IT Consultant

Kemira AB

📅 2020 - 2020

- Responsible for developing and implementing IT solutions tailored to customer needs
- Worked with SQL databases for data storage, retrieval, and transformation
- Improved communication between different departments through technical solutions

EDUCATION

Computer Engineering

Halmstad University

📅 2020 - 2026

- The program has provided me with a broad technical foundation in software development, networking, embedded systems, and database management. I have specialized in areas such as data engineering, cloud computing (with a focus on Microsoft Azure), artificial intelligence, cybersecurity, and programming in C, Java, Python, and SQL
- Other courses include object-oriented design, operating systems, web technologies, software architecture, and system integration

Engineering Science Program

TychoBrahe highschool

📅 2017 - 2020

- Focus: Physics, Mathematics, and Programming

SUMMARY

I am a motivated and analytical newly graduated engineer with experience in software development, database management, and system integration. I have gained strong skills in backend programming, API design, and database management from my studies and intern experiences. I perform well in an agile environment where collaboration, problem-solving, and communication are important. My goal is to build robust, user-friendly, and scalable systems that meet both technical and user requirements

SKILLS

Group Title

TCP/IP security protocols

Programming languages

Javascript Python SQL C

C++

Web Development & Software Testing

Web Development Software Testing

Communication & Collaboration

Communication Collaboration

IT Support

Windows environments

troubleshooting documentation

PROJECTS

Regulated Greenhouse System

- Developed an automated system to manage and regulate daily sunlight and darkness cycles within a greenhouse environment
- The project was implemented in the C programming language using Arduino Uno hardware along with various supporting electronic components

PROJECTS

Fine-Time Measurement-Based Safety System for Parent-Child Cycling (Thesis)

- Contributed to the Vision Zero initiative by developing a system aimed at improving cycling safety and reducing traffic-related injuries
- The project utilized ESP32 microcontrollers to measure distance using the Fine Time Measurement (FTM) protocol
- When the detected distance exceeded a predefined threshold, the system communicated via the bicycle's integrated CAN bus to limit the e-bike's speed and ultimately disable the electric motor
